Innovation Atelier Monitoring & Evaluation Framework and Tool

Result in a nutshell

PED Innovation Ateliers have been established in Amsterdam and Bilbao, mobilizing the local eco-system in order to foster the innovation capacity and stimulate the co-creation of knowledge and learning to support successful realization of PEDs.

For city authorities and stakeholders to Monitor & Evaluate the different aspects of the implementation of the PED Innovation Ateliers (IA) a conceptual framework, consisting of six components, was defined. The framework focuses on mapping the process, impact and success-factors of the IA in both cities.

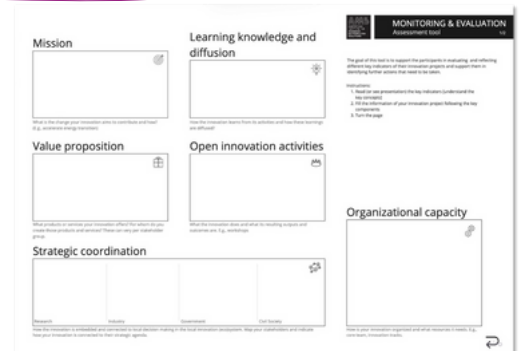

The framework and its key components proved to be efficient in supporting the identification of barriers, solutions and opportunities for replication. The framework was also successfully adopted by the fellow cities in the ATELIER project.

For more information, please refer to <https://smartcity-atelier.eu/app/uploads/D3.6.pdf>

Monitoring & Evaluation Tool

As a result of the Monitoring & Evaluation activities of the project, a monitoring & evaluation (M&E) tool was developed and validated. This tool, together with the M&E framework has been adopted by professionals and students working in innovative project.

Detail on result

Technical aspects:

- Provides a structure and guidance to Monitor and Evaluate an innovative project
- Support the user into reflecting on key success aspects of their projects and extended impact
- Facilitate the cross learning between pilot cities

Advantages:

- Can be adopted by any innovative project working with multiple stakeholders and domains to evaluate the impact of their governance.

Challenges:

- Making the M&E framework easy to use, adopt and applicable to more generic innovative projects.

Example of ATELIER Fellow cities adoption of the M&E framework and tool

Further development

Potential for further development:

- Based on the IA Atelier activities with Lighthouse and Fellow cities activities the tool has been adopted and validated. A professional educational module will be developed to support other professionals in Monitoring their Innovation projects.

Potential areas of applicability:

- Innovative project working with multiple stakeholders and domains to evaluate the impact of their governance.
